Live Theme Previews

Try on New Themes

Gone are the days of rushing to update your header, background, and the like as soon as you activate a new theme. You can now customize these options **before** activating a new theme. Note: this feature is available for installed themes only.

Customize Current Theme

Satisfy your curiosity and try on a fresh coat of paint — you can also use the live preview mode to customize your current theme. Look for the Customize link on the Themes screen.

[Add New](#)**Active: Twenty Seventeen**[Customize](#)**Twenty Eleven****Twenty Fifteen**

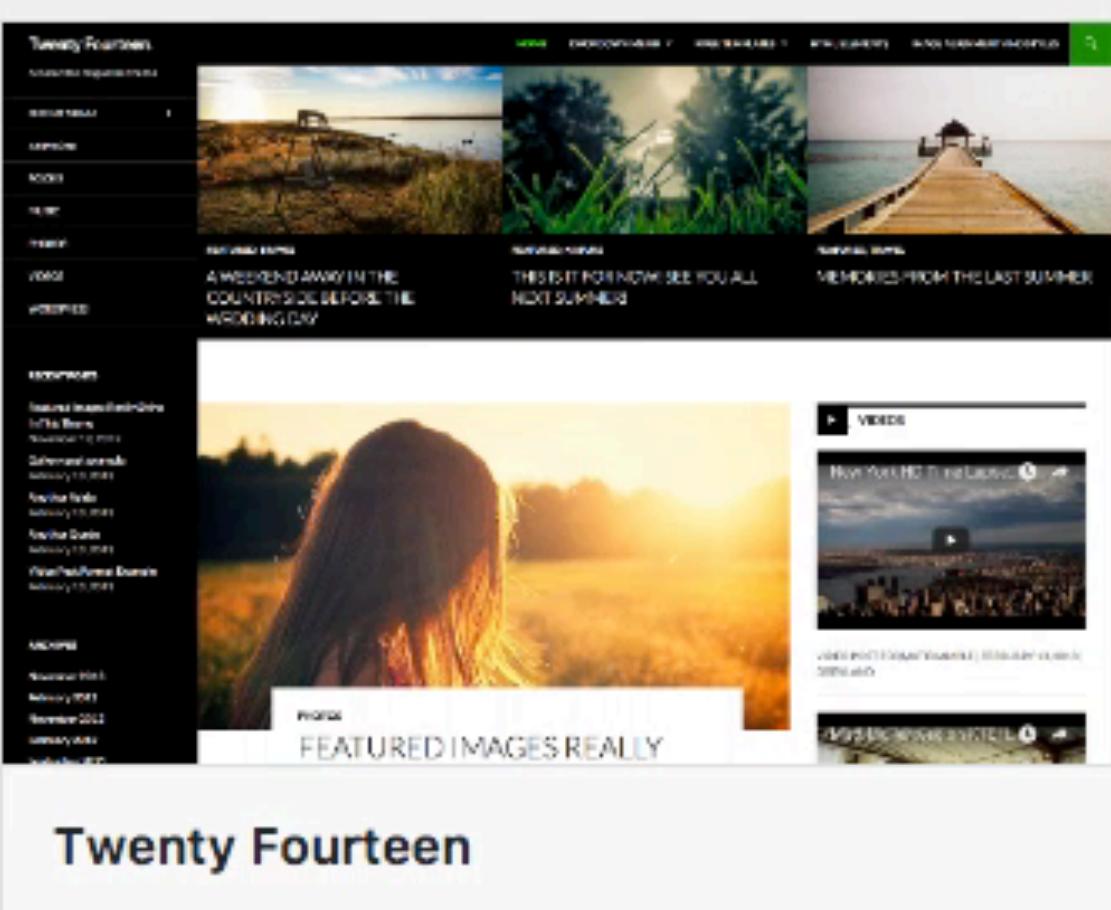

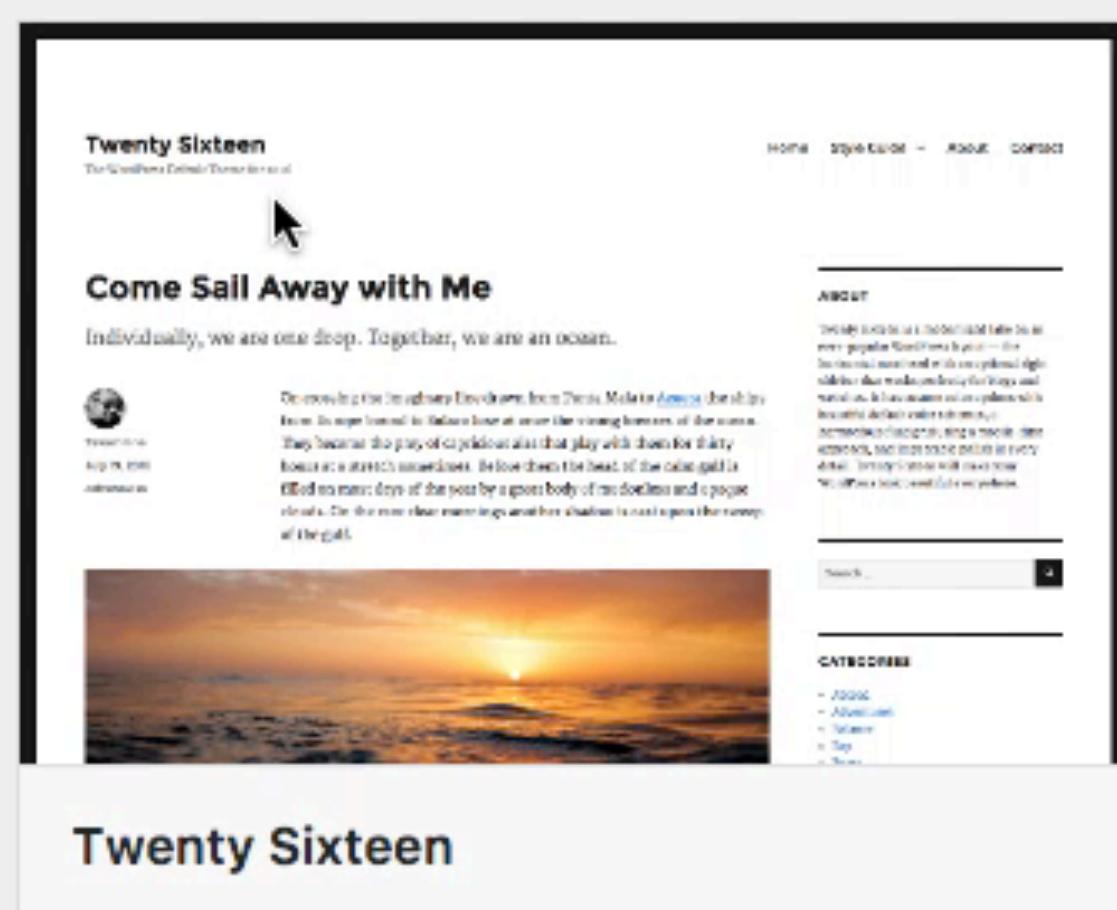

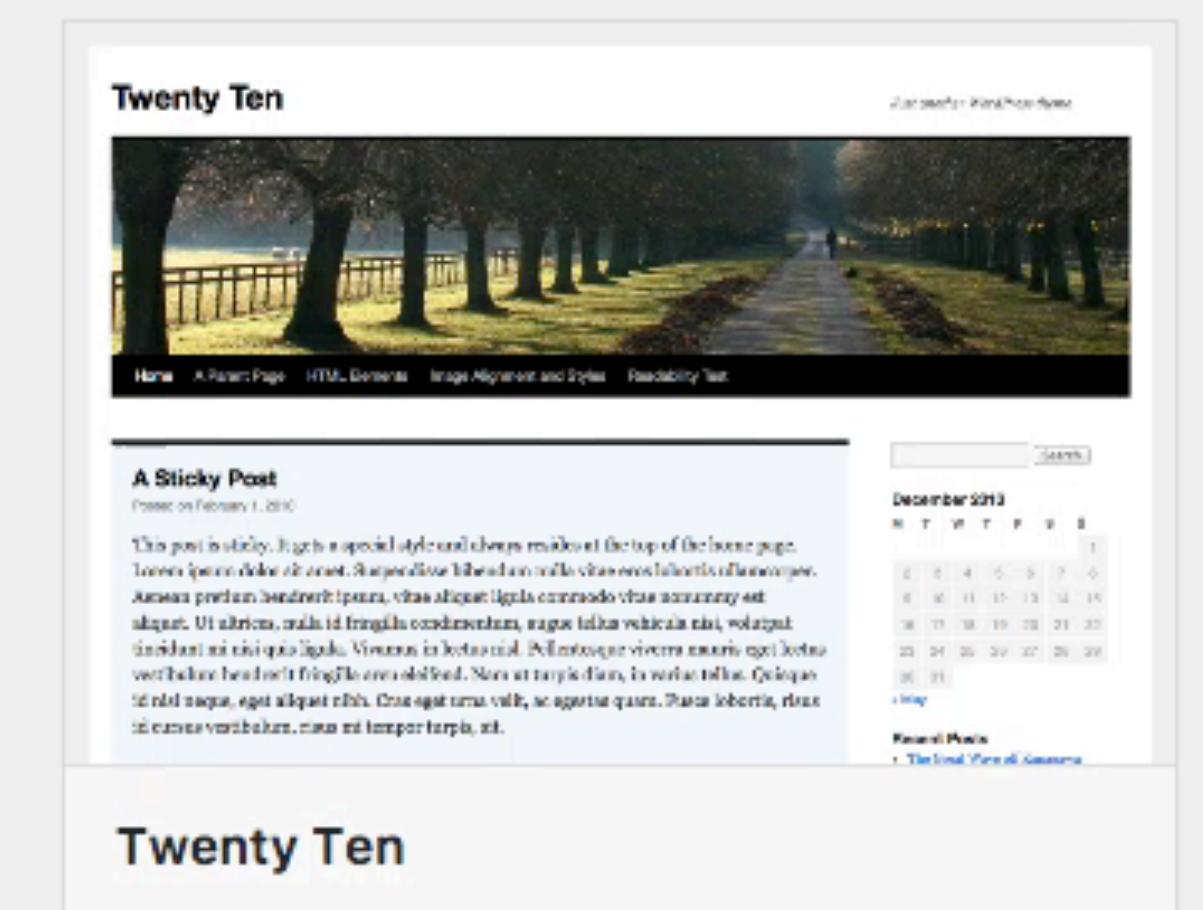

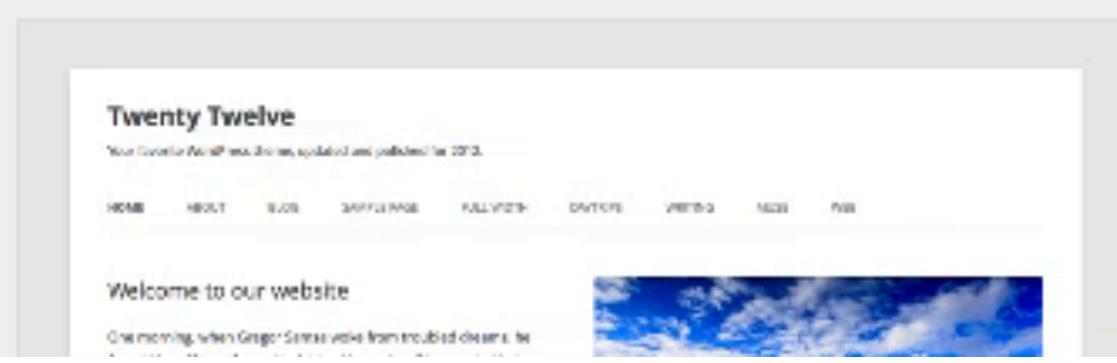

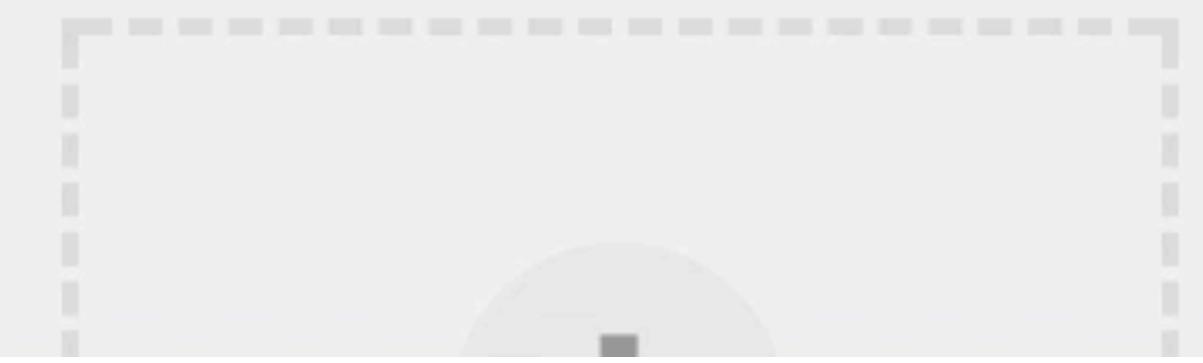

The Twenty Fifteen theme is the official WordPress theme for 2015. It's sophisticated, lightweight, and accessible.

ABOUT

Our 2015 default theme is clean, bright, and minimalist. It's a "Theme for Everyone" designed to make it easy for everyone to get started with WordPress, and add their own unique touch.

THE MYTH OF THE PIER

Jarred after the fashion of the Middle Ages, they bore upon their shoulders a splendid pair of wings; but when especially ill-matched, their wings long were which were twined in their faces, and the web which they made of them. Those webs were made of baton, and when they did, and even in the long, wide straight, all accurst, and all abhorred, and once having捉起 (caught) with open them,

Sample Page

This is an example page. It's different from a blog post because it will stay in one place and will show up in your site navigation (in most themes). Most people start with an About page that introduces them to potential site visitors. It might say something like this:

Lorem ipsum dolor sit amet, minim molestie argumentum est at, pri legere torquatos instructior ex. Vis id odio atomorum oportere, quem modo fabellas sit at, dicat semper est ne. Apeirian detraxit pri eu. No solum accusam has. Ius ne harum mundi clita, eu pro ratione audiam.

...or something like this:

Lorem ipsum dolor sit amet, minim molestie argumentum est at, pri legere torquatos instructior ex. Vis id odio atomorum oportere, quem modo fabellas sit at, dicat semper est ne. Apeirian detraxit pri eu. No solum accusam has. Ius ne harum mundi clita, eu pro ratione audiam.

As a new WordPress user, you should go to [your dashboard](#) to delete this page and create new pages for your content. Have fun!

Add an editor in PHP

wp_editor()

https://developer.wordpress.org/reference/functions/wp_editor/

New in 4.8: Add an editor in JavaScript

wp.editor.initialize()

<https://make.wordpress.org/core/2017/05/20/editor-api-changes-in-4-8/>

Extend the editor

```
jQuery( document ).on( 'tinymce-editor-setup', function( event, editor ) {  
    editor.settings.toolbar1 += ',mybutton';  
  
    editor.addButton( 'mybutton', {  
        text: 'My button2',  
        icon: false,  
        onclick: function () {  
            editor.insertContent("It's my button!");  
        }  
    });  
});
```

Media Guide

Collapse menu 

WordPress Media Backbone Guide

An introduction to Backbone design patterns and reusable elements in the WordPress Media experience. Knowledge of [Backbone](#) is a soft prerequisite.

wp.Backbone.View

An extension of `Backbone.View`. All views in WordPress are built on top of this. A Subview Manager is baked in via `wp.BackboneSubviews`.

Example

TEMPLATE MARKUP

```
<script type="text/template" id="tmpl-example-1-view-1">
    A view template.
    <div class="subview-container"></div>
</script>
<script type="text/template" id="tmpl-example-1-view-2">
    A subview template.
</script>
```

An element goes in a view where a subview will be rendered (here `.subview-container`).

`wp.template()` will find templates where `id="tmpl-{...}"`, so ID templates accordingly.

`wp.template()` expects Mustache-inspired templating tags (see [#22344](#)), so use them:

```
{{{ interpolating }}} , {{ 'escaping' }} , <# execution #>
```

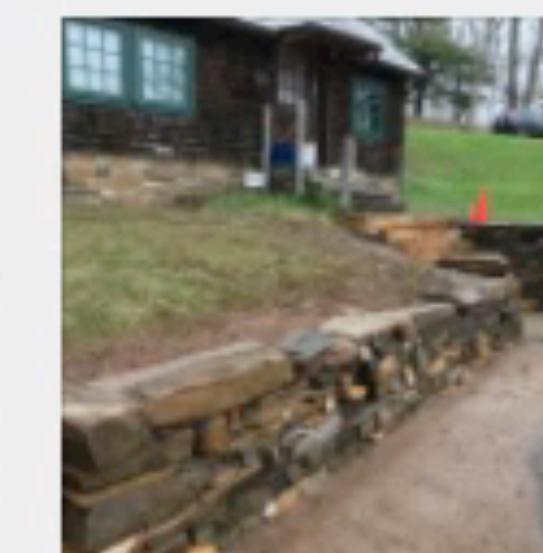

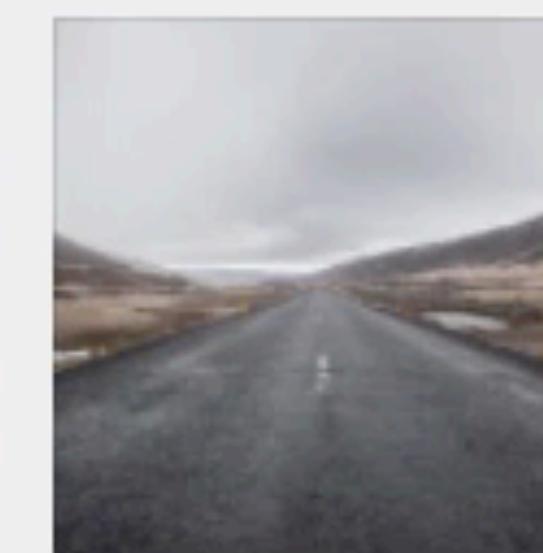

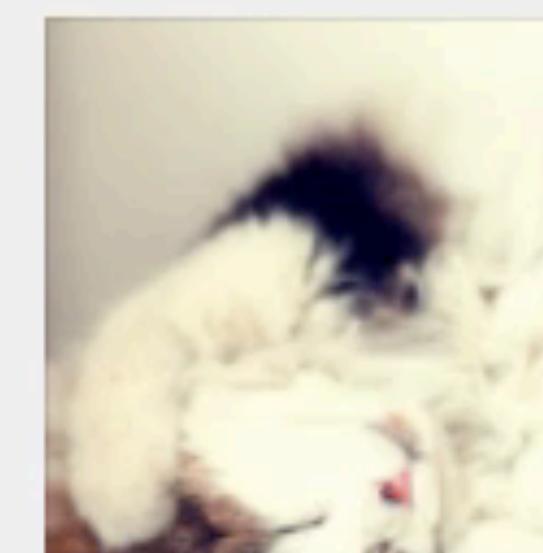

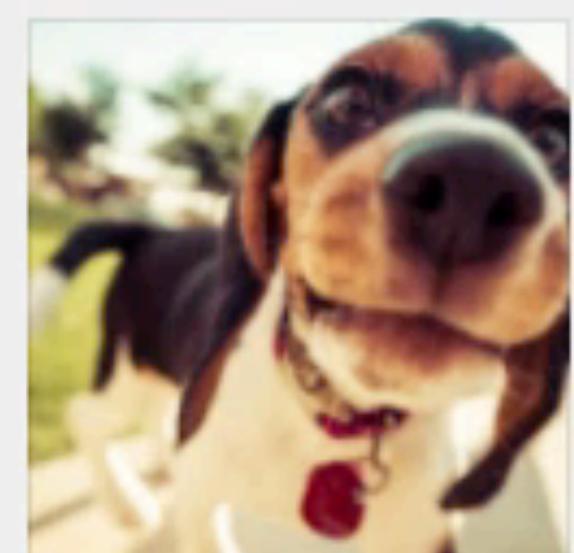

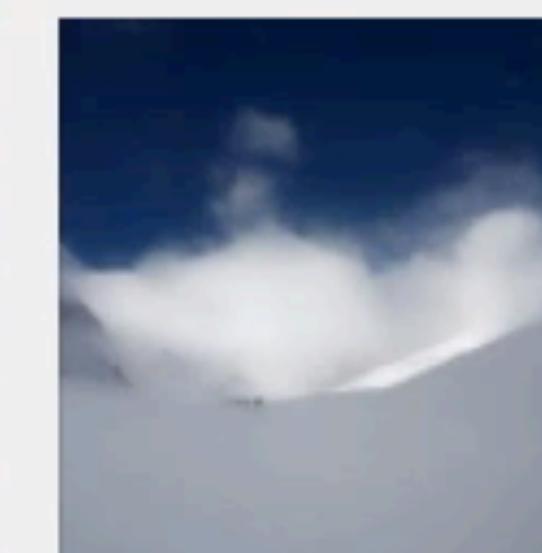

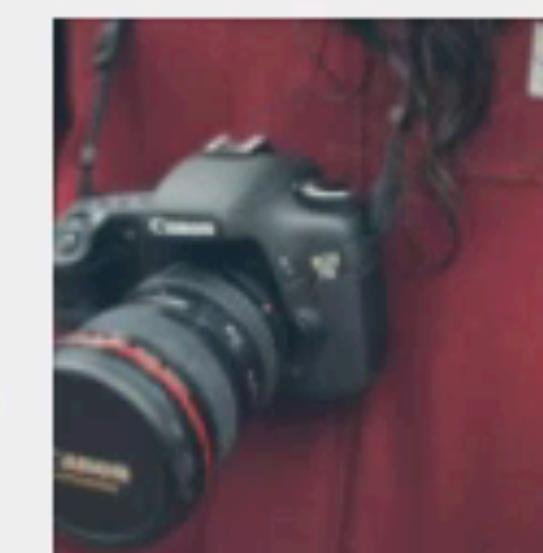

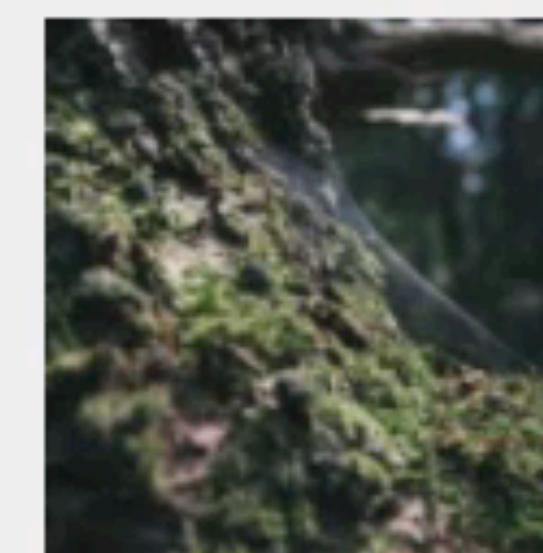

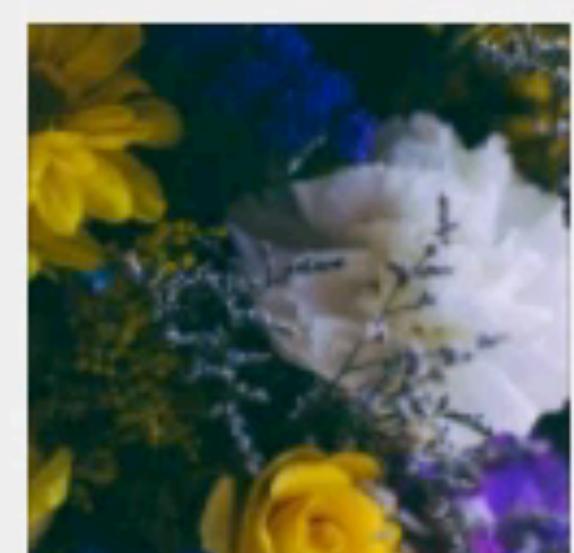

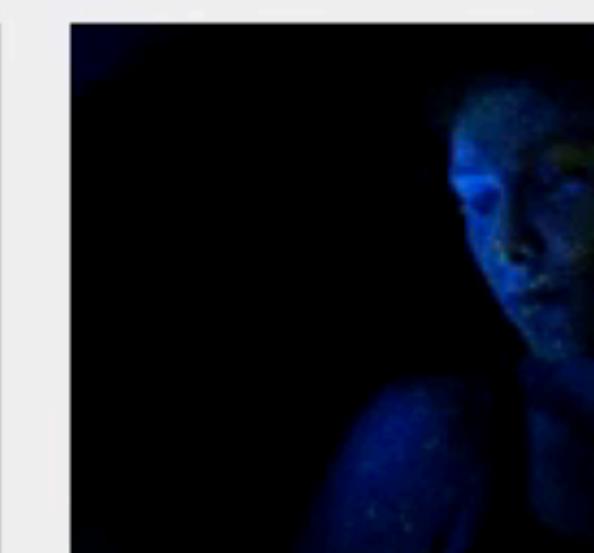

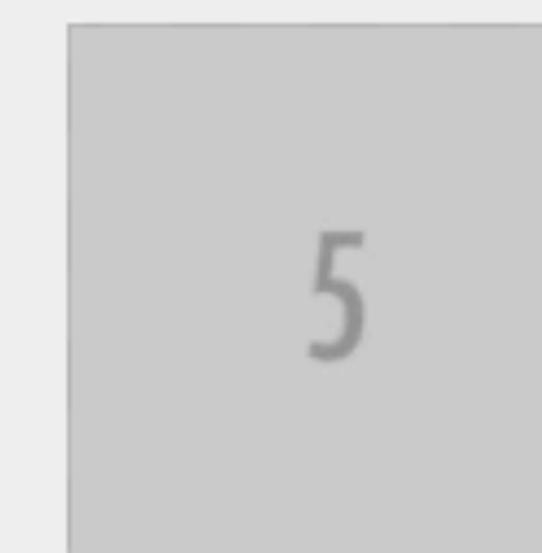

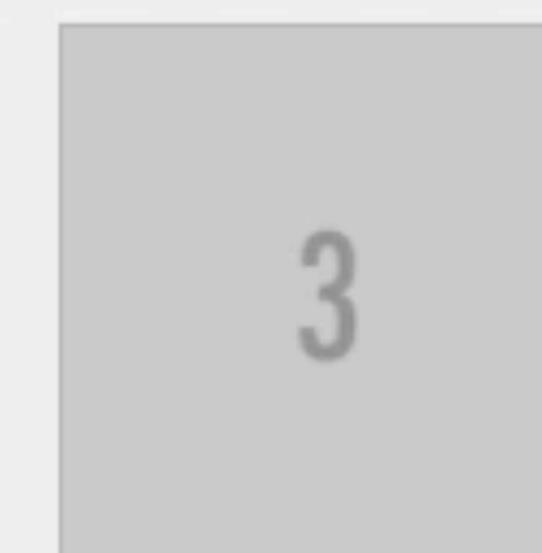

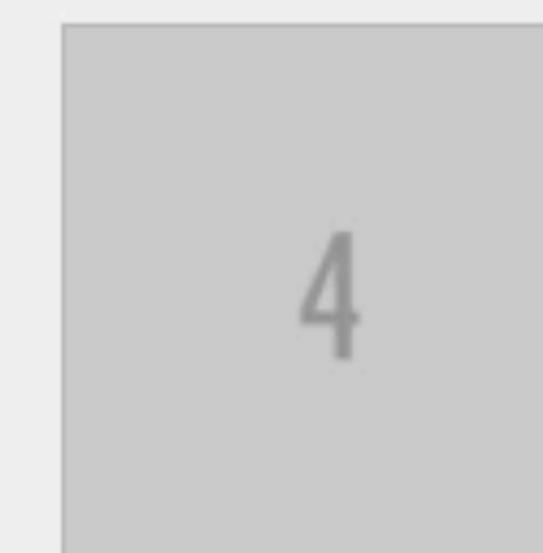

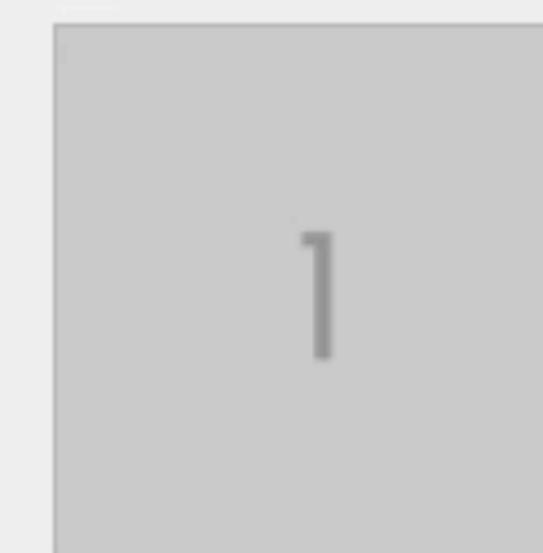

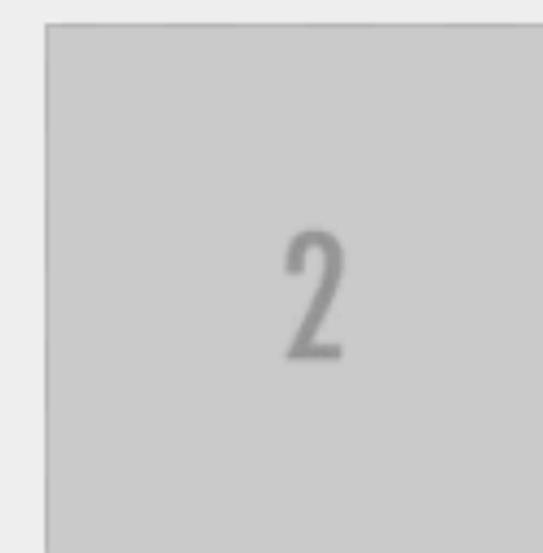

JAVASCRIPT

```
$(document).ready( function() {
    // Create view and subview constructors.
    var ViewConstructor = wp.Backbone.View.extend({
        // assign a compiled template function.
```

Please welcome Underscore.js and Backbone.js to core. fixes #21664.

Underscore.js and Backbone.js are tools that will help us improve the quality of our JavaScript. Their consistent APIs, verbose documentation, and wide usage make them a particularly good fit for WordPress core and our community.

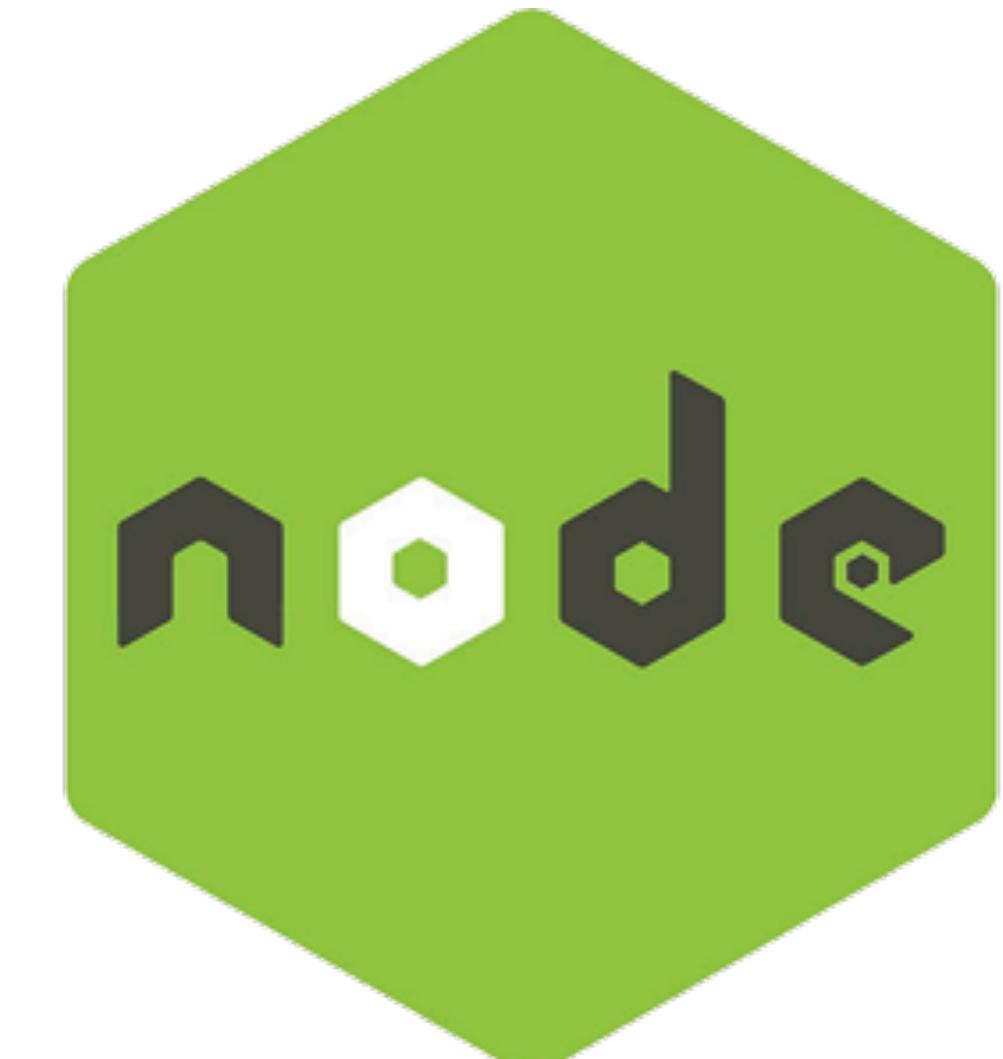

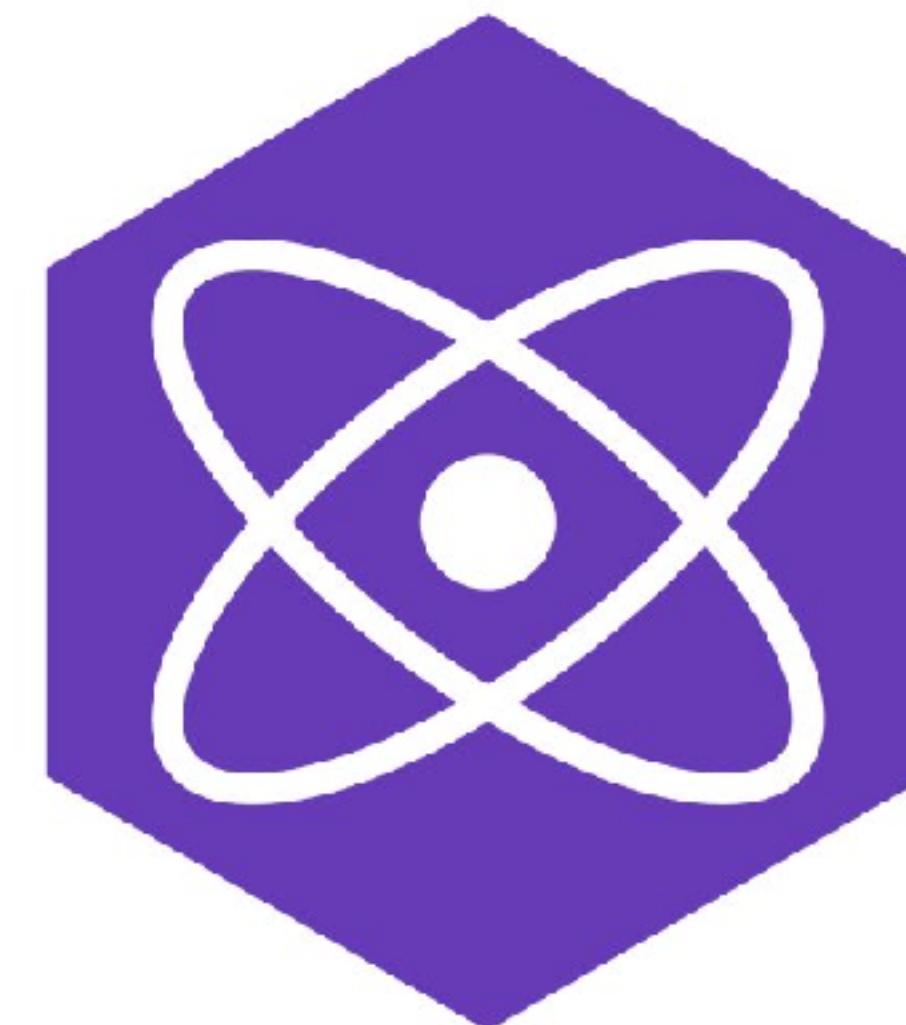

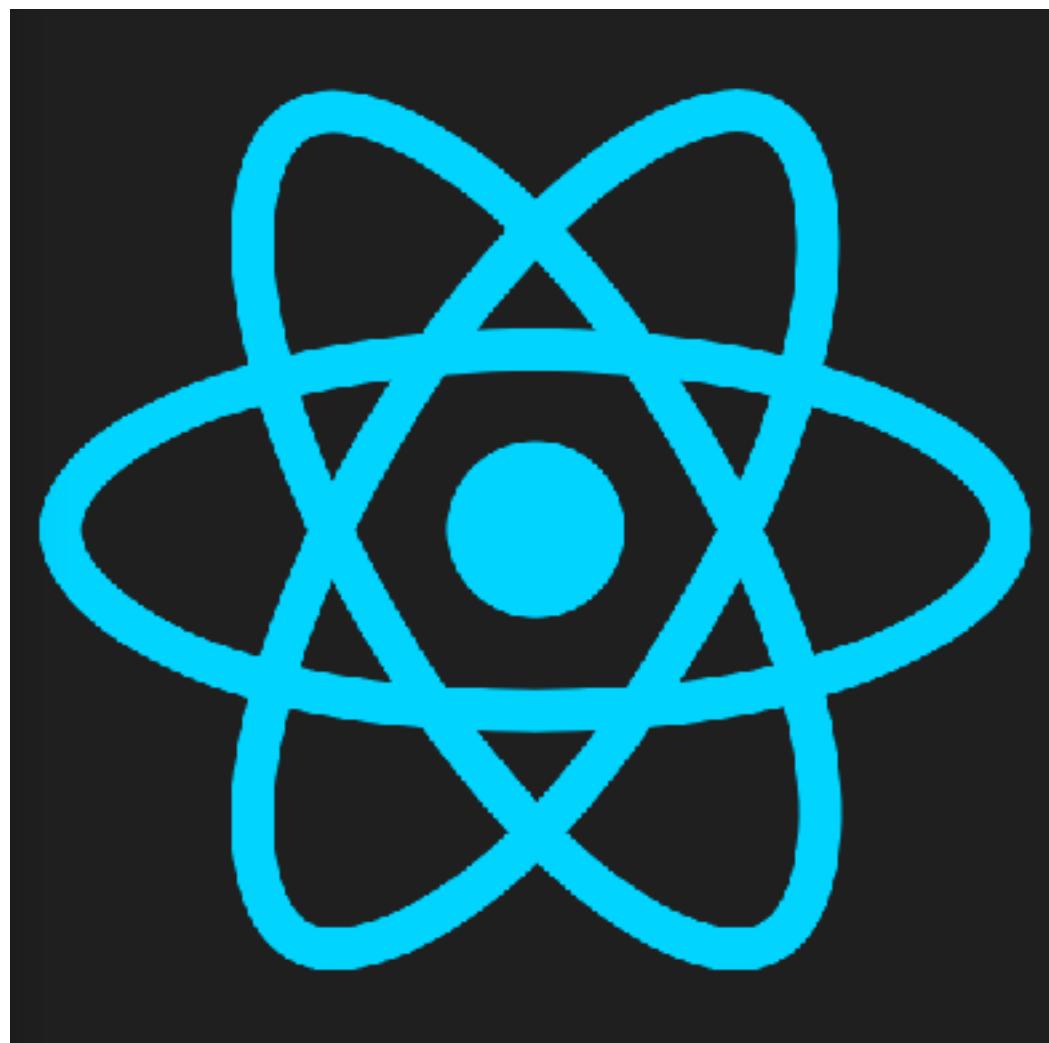

PART III: Future WordPress JavaScript

Next for JavaScript in core

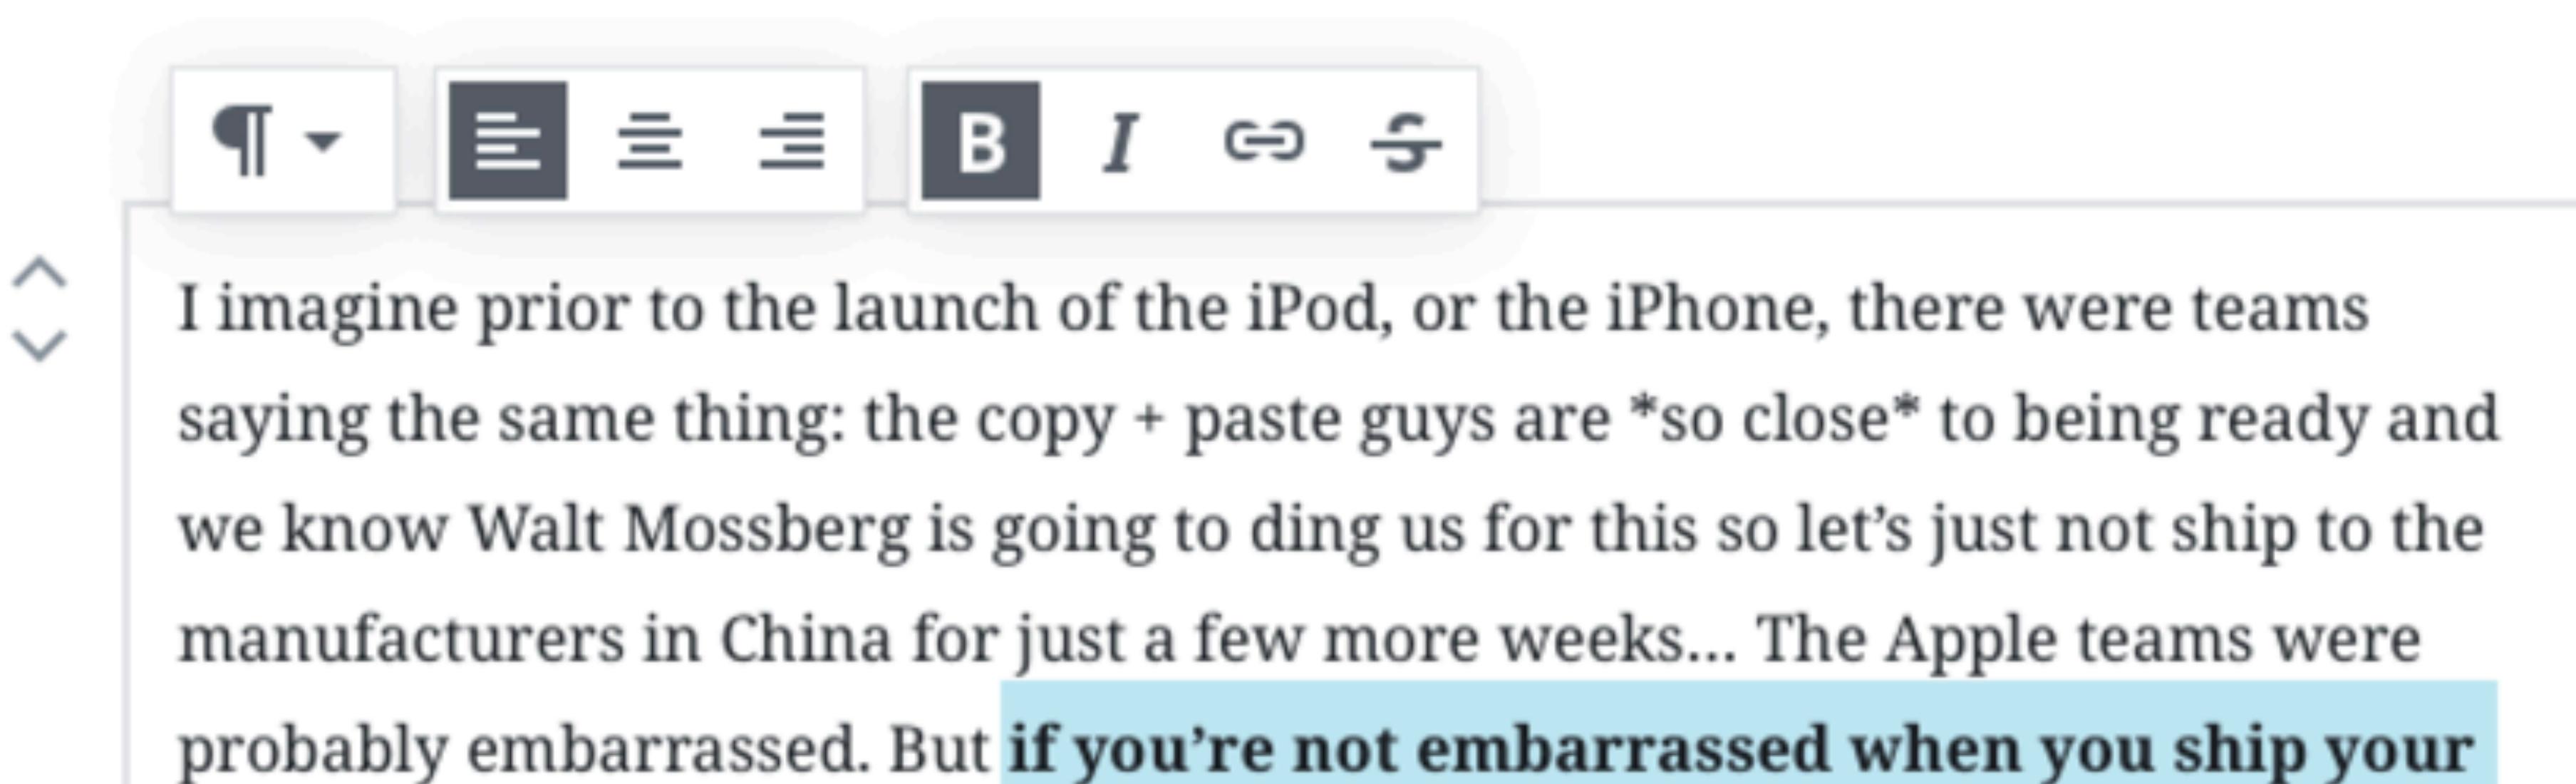

Exciting times!

The New Editor

Gutenberg

Prototyping since 1440.

I imagine prior to the launch of the iPod, or the iPhone, there were teams saying the same thing: the copy + paste guys are *so close* to being ready and we know Walt Mossberg is going to ding us for this so let's just not ship to the manufacturers in China for just a few more weeks... The Apple teams were probably embarrassed. But if you're not embarrassed when you ship your

Better date handling in JavaScript

`wp.date.format()` - Format a date.

`wp.date.date()` - Format a date in the site's timezone.

`wp.date.gmdate()` - Format a date in UTC.

`wp.date.date_i18n()` - Format a date, and translate it.

Fin!
